

## Relief with Every Blink

**Blinking is the eye's natural way of replenishing the tear film.**

**Blink Contacts' Lubricating Eye Drops** work with the eye's natural tears to help keep your contact lenses feeling fresh and comfortable all day. When your lenses feel dry, use **Blink Contacts'** eye drops to lubricate soft and rigid gas permeable (RGP) contact lenses while you wear your lenses or prior to lens application.

**Instantly moisturizes** dry lenses with hyaluronate

Hyaluronate works as a **hydration booster** to help eyes stay refreshed and comfortable through **end of day**

Includes **beneficial electrolytes** similar to those found in natural tears
